

NYS Master Teachers & MathforAmerica present: **SCIENCE LEARNING FROM HOME**

NYS Master Teachers from all regions and MathforAmerica teachers have created a resource to help educators and families continue their science teaching opportunities and STEM activities with their students and children. The impetus for this project was to give teachers and caregivers a quick, easy, and accessible tool while we continue on this unprecedented path of teaching and learning.

This amazingly rich document includes STEM activities and learning opportunities for K-12th grade. While creating and compiling these resources, we pushed ourselves to think deeply about our knowledge of STEM content, enrich our knowledge of pedagogy, and thoughtfully work on implementing practices into our “new normal” lives. We did all of this while keeping in mind the knowledge of our students, their families, and our local communities.
